

## Code Review

Your Name: Robert Hughes. Your CID: C11411208

Metric	Peer Comments	Response to Peer Comments
<b>Satisfice</b> <ul style="list-style-type: none"> <li>Does the code accomplish the task?</li> </ul>	- Yes it seems to when the sample output is known.	I agree that it seems like it works, but I feel like there could be issues I do not know about, considering my autograder got a 6/15, but I couldn't see what was wrong.
<b>Efficiency</b> <ul style="list-style-type: none"> <li>Are there different ways to solve the problem?</li> <li>Are there other ways to handle (more) edge cases?</li> <li>Is there a shorter/easier/cleaner/faster way to solve the problem?</li> </ul>	Yes. Could've used more data type casting, which would limit my loops and if statements, leading to cleaner, faster, and simpler code. Some parts were overcomplicated. Keep it Simple Silly	I will practice including the data casting on my own time, so that I can use it to be more efficient on future labs and assignments.
<b>Readability</b> <ul style="list-style-type: none"> <li>Is the code readable?</li> <li>Are comments being used well?</li> </ul>	The code is readable and the comments have improved.	I will attempt to continue developing my comments, making sure they explain my code as if the reader knows nothing about code.
