Problem: code does not scan the amount of numbers per line, meaning out of bounds in first few lines

Strategy/ies:

1. Read in amount of numbers in line, then for loop through until entry/ next spot is found

2. add an if statement for whitespace

3. add code to remove whitespace

4. add code to ignore non 1s & 0s

problem: not all numbers are in line

strategy/ies:

1. format each lineu

2. go ahead and ignore the piece of your line touching whitespace below (if line below has less characters)
